

The LFE Module is the missing link for those who want to work in immersive environments. Thanks to its frequency range from 24Hz to 160Hz, it meets the Dolby Atmos standards. Moreover, a potentiometer allows you to manually adjust the level from -10dB to +10dB. The LFE Module is installed in place of the blank panel of your existing Sub A225-M*. Max Peak SPL: 117.5dB in anechoic environment.

SPL@ (-10dBu ; 1m)

*Sub A225-M produced from September 2022 onwards allow the installation of the module without further modification. For all older Sub A225-Ms, please contact us for further information.
